MONTHLY REPORT NO 36

MAY 2025

NTV

Exploring Privacy, Self-Sovereignty and Trustless Innovation

Here is a summary of work done by No Trust Verify since our last report

05 MAY

We carried out SEO optimizations on our website, blog, and articles to enhance their visibility and performance on search engines.

08 MAY

We celebrated **the 3rd anniversary of No Trust Verify**. 🎂

Since Block #735 425, we've been fearlessly exploring privacy, self-sovereignty, and trustless innovation.

A heartfelt thank you to our partners, contributors, and everyone who has supported us along the way.
Here's to continuing the journey — with code, determination, and conviction.

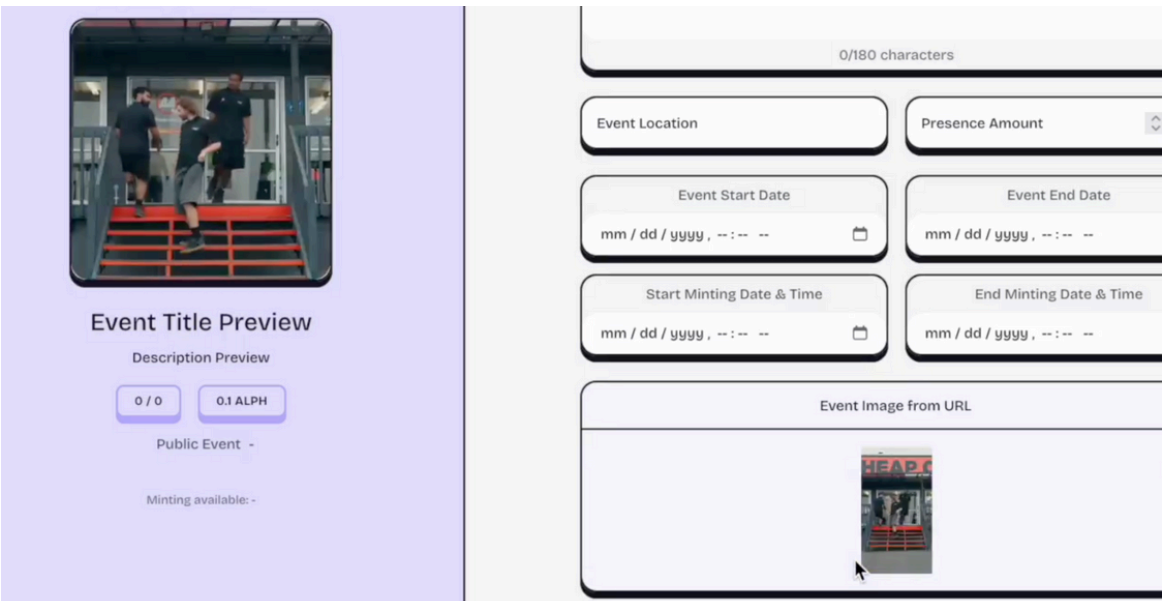
23 MAY

With our dApp Presence Protocol, we will offer multiple types of NFTs for a single event — an approach we've validated and will fully roll out with the Danube upgrade.

24 MAY

Presence Protocol now supports video. Simply paste a video link to permanently record your events on Alephium.

.



WORK-IN-PROGRESS

NEDAO

NEDAO is an initiative from the Canton of Neuchâtel, Switzerland, designed to give citizens, small businesses, and institutions a concrete opportunity to explore decentralized technologies—such as smart contracts, DAOs, and decentralized identity—and their potential in governance. Created as an educational and participatory platform, NEDAO now offers a functional environment where users can submit and vote on local projects using secure decentralized identity.

We joined the project to support future users through the onboarding process and to help create tutorials and guidance materials.

TEASER

ALEPHIUM METRICS
